

How do we achieve effective remote teaching and learning?

Effective teaching

Didactic approach

Invest more in the quality of lessons. Explain clearly, provide structure, involve the students, get them practising, give feedback.

Interaction

Build in interaction with and between students to increase motivation.

Independent working

Allow students to work independently, give them clear tasks to work on.

Extra attention

Give extra support to vulnerable students.

Risks during lessons

- » Weaker students
- » Issues with well-being
- » Less (active) participation

**Good lessons
more important
than ever!**

Risks for schools:

- » High number of absentees
- » High workload
- » Not enough practical work/
practical subjects

Effective organisation

Accessibility

Ensure access to the lessons for all students (laptop, WiFi, software).

Professionalization

Support teachers to provide online teaching.

Well-being

Monitor students' well-being. Be aware of loneliness among students and high workload among teachers.

Opportunities to catch up

Reduce learning loss by giving students the opportunity to catch up on their work.

Parental involvement

Actively involve parents in their children's distance learning.

How can I find a work placement during this period?

How are things going at home?

I really miss classmates!

My WiFi is not working.
